Impracticability

Sections 2-614(1) and 2A-404(1) require reasonable substitution for berthing, loading, and unloading facilities that become unavailable. They also require reasonable substitution for transportation and delivery systems that become "commercially impracticable"; if a practical alternative exists, "performance must be tendered and accepted." Md. Code Ann., Com. Law §§ 2-614, 2A-404. If Howard agreed to send the prints by rail, but a critical railroad bridge is unusable and no trains can run, delivery by truck would be required.
Section 2-615 says that the failure to deliver goods is not a breach of the seller's duty "if performance as agreed has become impracticable by the occurrence of a contingency the non-occurrence of which was a basic assumption on which the contract was made or by compliance in good faith with any applicable foreign or domestic government regulation or order whether or not it later proves to be invalid." Md. Code Ann., Com. Law § 2-615. Section 2A-405(b) is similar for leases.

Right to Adequate Assurances of Performance

Section 2-609, Comment 1, of the UCC observes that "the essential purpose of a contract…is actual performance [but] a continuing sense of reliance and security that the promised performance will be forthcoming when due is an important feature of the bargain." Thus the UCC says that if one party has "reasonable grounds for insecurity arise…either party may in writing demand adequate assurance and until he receives such assurance may if commercially reasonable suspend [his own] performance[.]" Md. Code Ann., Com. Law § 2-609, cmt. 1.

Anticipatory Repudiation

Obviously if a person repudiates the contract, it's clear she will not perform, but what if she repudiates before time for performance is due? Does the other side have to wait until nonperformance actually happens, or can he sue in anticipation of the other's default? Sections 2-610 and 2A-402 say the aggrieved party can do either: wait for performance or "resort to any remedy for breach." Md. Code Ann., Com. Law §§ 2-610 and 2A-402. Under sections 2-611 and 2A-403, the party who anticipatorily repudiated can "retract his repudiation unless the aggrieved party has, since the repudiation, cancelled or materially changed his position[.]" Md. Code Ann., Com. Law §§ 2-611 and 2A-403. Suppose that Howard has cause to suspect that if he does deliver the goods, Bunker won't pay. Howard may write to Bunker and demand—not request—assurances of adequate performance. If such assurances are not adequately forthcoming, Howard may assume that Bunker repudiated the contract and seek appropriate remedies.

Product Liability & Warranties

Figure 15 Broken Smart Phone Needs Repair

Products liability describes a type of claim, not a separate theory of liability. Products liability has strong emotional overtones—ranging from the pro-litigation position of consumer advocates to the conservative perspective of the manufacturers.

History of Products-Liability Law

The theory of caveat emptor—let the buyer beware—that pretty much governed consumer law from the early eighteenth century until the early twentieth century made some sense. A horse-drawn buggy is a fairly simple device: its workings are apparent; a person of average experience in the 1870s would know whether it was constructed well and made of the proper woods. Most foodstuffs 150 years ago were grown at home and "put up" in the home kitchen or bought in bulk from a local grocer, subject to inspection and sampling; people made home remedies for coughs and colds and made many of their own clothes. Houses and furnishings were built of wood, stone, glass, and plaster—familiar substances.

Entertainment was a book or a piano. The state of technology was such that the things consumed were, for the most part, comprehensible and—very important—mostly locally made, which meant that the consumer who suffered damages from a defective product could confront the product's maker directly. Local reputation is a powerful influence on behavior.

The free enterprise system confers great benefits, and no one can deny that: materialistically, compare the image sketched in the previous paragraph with circumstances today. But those benefits come with a cost, and the fundamental political issue always is who has to pay. Consider the following famous passage from Upton Sinclair's great novel *The Jungle*. It appeared in 1906. He wrote it to inspire labor reform; to his dismay, the public outrage focused instead on consumer protection reform. Here is his description of the sausage-making process in a big Chicago meatpacking plant:

> There was never the least attention paid to what was cut up for sausage; there would come all the way back from Europe old sausage that had been rejected, and that was moldy and white—it would be dosed with borax and glycerin, and dumped into the hoppers, and made over again for home consumption.
>
> There would be meat that had tumbled out on the floor, in the dirt and sawdust, where the workers had tramped and spit uncounted billions of consumption germs. There would be meat stored in great piles in rooms; and the water from leaky roofs would drip over it, and thousands of rats would race about on it. It was too dark in these storage places to see well, but a man could run his hand over these piles of meat and sweep off handfuls of the dried dung of rats. These rats were nuisances, and the packers would put poisoned bread out for them; they would die, and then rats, bread, and meat would go into the hoppers together. This is no fairy story and no joke; the meat would be shoveled into carts, and the man who did the shoveling would not trouble to lift out a rat even when he saw one—there were things that went into the sausage in comparison with which a poisoned rat was a tidbit. There was no place for the men to wash their hands before they ate their dinner, and so they made a practice of washing them in the water that was to be ladled into the sausage. There were the butt-ends of smoked meat, and the scraps of corned beef, and all the odds and ends of the waste of the plants, that would be dumped into old barrels in the cellar and left there.
>
> Under the system of rigid economy which the packers enforced, there were some jobs that it only paid to do once in a long time, and among these was the cleaning out of the waste barrels. Every spring they did it; and in the barrels would be dirt and rust and old nails and stale water—and cartload after cartload of it would be taken up and dumped into the hoppers with fresh meat, and sent out to the public's breakfast. Some of it they would make into "smoked" sausage—but as the smoking took time, and was therefore expensive, they would call upon their chemistry department, and preserve it with borax and color it with gelatin to make it brown. All of their sausage came out of the same bowl, but when they came to wrap it they would stamp some of it "special," and for this they would charge two cents more a pound. (Sinclair, 136)

It became clear from Sinclair's exposé that associated with the marvels of then-modern meatpacking and distribution methods was food poisoning: a true cost became apparent. When the true cost of some money-making enterprise (e.g., cigarettes) becomes inescapably apparent, there are two possibilities.

First, the legislature can in some way mandate that the manufacturer itself pay the cost; with the meatpacking plants, that would be the imposition of sanitary food-processing standards. Typically, Congress creates an administrative agency and gives the agency some marching orders, and then the agency crafts regulations dictating as many industry-wide reform measures as are politically possible. Second, the people who incur damages from the product (1) suffer and die or (2) access the machinery of the legal system and sue the manufacturer. If plaintiffs win enough lawsuits, the manufacturer's insurance company raises rates, forcing reform (as with high-powered muscle cars in the 1970s); the business goes bankrupt; or the legislature is pressured to act, either for the consumer or for the manufacturer.

If the industry has enough clout to blunt—by various means—a robust pro-consumer legislative response so that government regulation is too lax to prevent harm, recourse is had through the legal system. Thus for all the talk about the need for tort reform (discussed later in this chapter), the courts play a vital role in policing the free enterprise system by adjudicating how the true costs of modern consumer culture are allocated.

Obviously the situation has improved enormously in a century, but one does not have to look very far to find terrible problems today. Just watching TV and you will see countless legal advertisements for product liability lawsuits, asbestos claims, Zantac, Paraquat, Johnson & Johnson's talcum powder, Roundup, Risperdal, and opioid claims, just to name a few.

Products liability can also be a life-or-death matter from the manufacturer's perspective. In 2009, Bloomberg Business Week reported that the costs of product safety for manufacturing firms can be enormous: "Peanut Corp., based in Lynchberg, Va., has been driven into bankruptcy since health officials linked tainted peanuts to more than 600 illnesses and nine deaths. Mattel said the first of several toy recalls it announced in 2007 cut its quarterly operating income by $30 million. Earlier this decade, Ford Motor spent roughly $3 billion replacing 10.6 million potentially defective Firestone tires." (Orey 20). Businesses complain, with good reason, about the expenses associated with products-liability problems.

Current State of the Law

Although the debate has been heated and at times simplistic, the problem of products liability is complex and most of us regard it with a high degree of ambivalence. We are all consumers, after all, who profit greatly from living in an industrial society. In this chapter, we examine the legal theories that underlie products-liability cases that developed rapidly in the twentieth century to address the problems of product-caused damages and injuries in an industrial society.

In the typical products-liability case, three legal theories are asserted—a contract theory and two tort theories. The contract theory is warranty, governed by the UCC, and the two tort theories are negligence and strict products liability, governed by the common law. See Figure 17 "Major Products Liability Theories".

Figure 16 Major Products Liabilities Theories

Warranties

The UCC governs express warranties and various implied warranties, and for many years it was the only statutory control on the use and meanings of warranties. In 1975, after years of debate, Congress passed and President Gerald Ford signed into law the Magnuson-Moss Act, which imposes certain requirements on manufacturers and others who warrant their goods. 15 U.S.C. §§ 2301, et. seq. We will examine both the UCC and the Magnuson- Moss Act.

Types of Warranties

Express Warranties

Figure 17 "Money Back Guarantee"

An express warranty is created whenever the seller affirms that the product will perform in a certain manner. Formal words such as "warrant" or "guarantee" are not necessary. A seller may create an express warranty as part of the basis for the bargain of sale by means of (1) an affirmation of a fact or promise relating to the goods, (2) a description of the goods, or (3) a sample or model. Any of these will create an express warranty that the goods will conform to the fact, promise, description, sample, or model. Thus a seller who states that "the use of rustproof linings in the cans would prevent discoloration and adulteration of the Perform solution" has given an express warranty, whether he realized it or not. *Rhodes Pharmacal Co. v. Continental Can Co.*, 72 Ill. App. 2d 362 (Ill. App. Ct. 1976). Claims of breach of express warranty are, at base, claims of misrepresentation.

But the courts will not hold a manufacturer to every statement that could conceivably be interpreted to be an express warranty. Manufacturers and sellers constantly "puff" their products, and the law is content to let them inhabit that gray area without having to make good on every claim. The UCC states "an affirmation merely of the value of the goods or a statement purporting to be merely the seller's opinion or commendation of the goods does not create a warranty." Md. Code Ann., Com. Law §2-313(2) (LexisNexis 2021). Facts do.

It is not always easy, however, to determine the line between an express warranty and a piece of puffery. A salesperson who says that a strawberry huller is "great" has probably puffed, not warranted, when it turns out that strawberries run through the huller look like victims of a massacre. But consider the classic cases of the
